## Contents

---

### 1.1 Settings

Django-XenForo has a number of settings that control its behavior. They've been given defaults that match a standard XenForo install. If you've altered your XenForo config, then you'll want to modify these as appropriate in your project's settings.py.

`django.conf.settings.COOKIE_PREFIX`

**Default** 'xf\_'

**Type** String

The prefix of the XenForo cookie.

This is used by `middleware.XFSessionMiddleware` to fetch the user's session cookie.

`django.conf.settings.DATABASE`

**Default** 'default'

**Type** String

The `DATABASES` connection to use for querying the XenForo database.

`django.conf.settings.IP_ADDRESS_KEY`

**Default** 'HTTP\_X\_REAL\_IP'

**Type** String

The HTTP Header is looked at for IP address comparison in `middleware.XFAuthenticationMiddleware`.

`django.conf.settings.TABLE_PREFIX`

**Default** 'xf\_'

**Type** String

The prefix for tables in the XenForo database.

Used throughout the app for querying against the XenForo database.

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`

## C

COOKIE\_PREFIX (in module `django.conf.settings`), [3](#)

## D

DATABASE (in module `django.conf.settings`), [3](#)

## I

IP\_ADDRESS\_KEY (in module `django.conf.settings`), [3](#)

## T

TABLE\_PREFIX (in module `django.conf.settings`), [3](#)
