
Django-XenForo Documentation

Release 0.5

Chris Hasenpflug

February 22, 2016

Contents

1	Contents	3
1.1	Settings	3
2	Indices and tables	5

Integrate [Django](#) with a [XenForo](#) forum installation.

Contents

1.1 Settings

Django-XenForo has a number of settings that control its behavior. They've been given defaults that match a standard XenForo install. If you've altered your XenForo config, then you'll want to modify these as appropriate in your project's `settings.py`.

`django.conf.settings.COOKIE_PREFIX`

Default '`xf_`'

Type String

The prefix of the XenForo cookie.

This is used by `middleware.XFSessionMiddleware` to fetch the user's session cookie.

`django.conf.settings.DATABASE`

Default '`default`'

Type String

The `DATABASES` connection to use for querying the XenForo database.

`django.conf.settings.IP_ADDRESS_KEY`

Default '`HTTP_X_REAL_IP`'

Type String

The HTTP Header is looked at for IP address comparison in `middleware.XFAuthenticationMiddleware`.

`django.conf.settings.TABLE_PREFIX`

Default '`xf_`'

Type String

The prefix for tables in the XenForo database.

Used throughout the app for querying against the XenForo database.

Indices and tables

- genindex
- modindex
- search

C

COOKIE_PREFIX (in module django.conf.settings), [3](#)

D

DATABASE (in module django.conf.settings), [3](#)

I

IP_ADDRESS_KEY (in module django.conf.settings), [3](#)

T

TABLE_PREFIX (in module django.conf.settings), [3](#)
